

ARE YOUR PATIENTS TAKING THINGS OUT OF YOUR OFFICE?

Patients bring all kinds of things into your office. Things they or others could be taking home if you're not using ROCCAL-D disinfectant. Because ROCCAL-D wipes out lots of things — like some very common, potentially harmful germs — that other disinfectants don't.

ROCCAL-D isn't just a disinfectant. EPA says it's also a virucide and a bactericide. It kills 10 common gram-positive and gram-negative bacteria. (Including *Pseudomonas aeruginosa*, a common cause of respiratory, urinary, skin and wound infections some competitors can't touch.) Plus canine distemper, canine herpes and pseudorabies viruses. And leaves behind a clean, fresh smelling surface.

ROCCAL-D is more economical too — about 8¢ a gallon at the 1:400 general disinfectant use dilution for hard inanimate surfaces. Diluted, it's non-corrosive. And when used with its Proportioning System, it automatically mixes for convenient use in large areas.

Patients bring all kinds of things into your hospital. But they won't take them home if you disinfect with ROCCAL-D. Write us to find out more.
